Practical 6 (Cost Estimation)

Python Code :

```
kloc = float(input("Enter KLOC: "))
mode = input("Enter mode (organic/semi/embedded): ").lower()

if mode == "organic":
    a = 2.4
    b = 1.05
    c = 2.5
    d = 0.38

elif mode == "semi-detached":
    a = 3.0
    b = 1.12
    c = 2.5
    d = 0.35

elif mode == "embedded":
    a = 3.6
    b = 1.20
    c = 2.5
    d = 0.32

else:
    print("Invalid mode")
    exit()

effort = a * (kloc ** b)
time = c * (effort ** d)
cost = effort * 100000
```

```
print("Effort:", round(effort, 2), "person-months")
print("Time:", round(time, 2), "months")
print("Cost: ₹", round(cost, 2))
```

Output :

```
Enter KLOC: 400
Enter mode (organic/semi/embedded): organic
Effort: 1295.31 person-months
Time: 38.08 months
Cost: ₹ 129531153.38
```
